

The Cretaceous Canopy Heist

Grade 2 math · Place value, Addition, Subtraction, Skip counting, Missing addends · Reading level grades 5-6

Detective: _____ **Date:** _____

An emergency alarm has shattered the peace of the volcanic valley. Someone bypassed the heavy steel paddock gates, freed a juvenile spinosaurus, and stole the encrypted dinosaur DNA database. The Chief Paleobotanist was locked in the prehistoric greenhouse to slow down our response. We must examine the clues, analyze the footprint logs, and identify the Rogue Handler before they escape the island.

1. Solve each math problem. The answer is a number, and the letter beside it is what that number stands for.
2. In the clue boxes, write that letter in every box showing the same number, then read the secret clue.
3. Use each clue to cross suspects off the list. The one suspect left at the end is the culprit!

My answer: the Rogue Handler is _____

Possible suspects

Cross off a row as each clue rules it out. The one left at the end is the culprit.

CLUE 1 Place value

We found a dropped GPS tracker near the Raptor paddock. Its digital screen is damaged, only showing specific digit values in the hundreds, tens, and ones places.

Solve each problem, then write its letter in every clue box that shows the same number.

A physical tally sheet was recovered from the control room. By adding up the escaped hatchlings from the nursery zones, we can decode the next step of our pursuit.

CLUE 5**Missing addends - the last clue**

The heavy security gates require a precise weight balance of supplies to open. We must calculate the missing value to unlock the final surveillance file.

First solve each problem. Then find each answer in the numbered list below and cross that sentence out. One sentence will be left - that is exactly what the villain did!

Step 1 - solve these:

$10 + \underline{\quad} = 15$

$2 + \underline{\quad} = 9$

$4 + \underline{\quad} = 12$

$8 + \underline{\quad} = 19$

$2 + \underline{\quad} = 4$

$1 + \underline{\quad} = 5$

$3 + \underline{\quad} = 15$

$7 + \underline{\quad} = 13$

$8 + \underline{\quad} = 17$

$2 + \underline{\quad} = 5$

$6 + \underline{\quad} = 7$

Step 2 - cross out the sentence with each answer:

1. The villain activates raptor stealth camouflage, then tracks movement with a thermal visor.
2. The villain leaps off a cliff with a pterodactyl glider, then short-circuits security with shock boots.
3. The villain swings a triceratops shield to block lasers, then snags a running specimen with a laser lasso.
4. The villain unleashes a deafening t-rex roarer sonic blast, then tracks movement with a thermal visor.
5. The villain smashes through steel gates with an ankylosaur club, then scans the brush with an amber scanner.
6. The villain leaps off a cliff with a pterodactyl glider, then tracks movement with a thermal visor.
7. The villain unleashes a deafening t-rex roarer sonic blast, then short-circuits security with shock boots.
8. The villain swings a triceratops shield to block lasers, then scans the brush with an amber scanner.
9. The villain activates raptor stealth camouflage, then short-circuits security with shock boots.
10. The villain swings a triceratops shield to block lasers, then tracks movement with a thermal visor.
11. The villain unleashes a deafening t-rex roarer sonic blast, then snags a running specimen with a laser lasso.
12. The villain swings a triceratops shield to block lasers, then signals raptors with a sonic whistle.
